(54) Title: IMPROVED VACUUM CLEANER

(57) Abstract: The improved vacuum cleaner (1) comprises a closed boxed body (2) that is provided with at least one aspiration port (3) of a flow (F) of aspirated matter composed of air and detritus "D", of at least one collection chamber (4) of said aspirated detritus "D" wherein an end of said aspiration port (3) empties, of an aspiration motor unit (5) connected to said port (3) and said collection chamber (4) with a compulsory conveying route defined in said boxed body (2), of at least one filtering element of said aspirated matter located along said compulsory conveying route between said collection chamber and said aspiration motor unit; said collection chamber (4) is internally provided with at least one barrier (7) transversally supported in the direction of said flow (F) of aspirated material, for the dynamic separation between the detritus "D" and the air, and of removable collection, compacting and extraction means (8) of the collected detritus "D".
